# Indentify Text
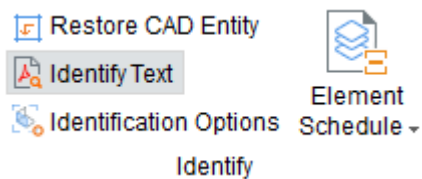

In actual projects, some PDF drawings are made up of lines, so you cannot pick out them by using Pick Label. To identify those drawings correctly, you can use this function to convert lines to texts first, and then identify them.

1. Click Identify Text, drag-select the info that you want to identify, and then right-click to confirm.

2. In the window, check and modify info.

3. Click **OK**.
