# Modify Name

In actual situations, you may draw elements incorrectly, for example, mistake

Col-2 as Col-1. Design changes occur at the construction stage. For example,

the entity C-1 at a specific location is changed to C-3, and its attribute info is

changed accordingly.

1. Click **Modify Name**, select the entity that you want to modify, and then

right-click to confirm.

2. In the **Modify Element Entity Name** window, the entity is selected by

default. In the **Target Element** area, select the check box for the element that

you want to replace, for example, C-2.

3. Click OK, and then the select C-1 is changed to C-2.

Note

Selecting the **Reserve private attributes** check box helps you to save the

attribute values in black font of C-1. Such as Top Elevation.

Note
