

Viewpoint and Solid

Viewpoint

After drawing the project, if you want to view the model from different viewpoints, you can use this function.

On the View tab, in the Viewpoint group, select the viewpoint that you want, and then the model in the drawing area will change automatically.

Solid

To make it easy to view entities, there are three ways to display entities: Solid, Frame and Solid/Frame.

On the View tab, in the Viewpoint group, click Solid, Frame or Solid/Frame to display models accordingly.
